STUNOUS
DIGITAL EDUCATION

OUR APPROACH

Studios is transforming the experience of learning by equipping lecturers and students with outstanding digital resources.

Sometimes labelled the “Netflix” of education, Studios partners with universities to produce inspiring and relevant education videos.

Check out this guide to see how we can support your university with customised media solutions.

STUDIOUS FEATURE

Studios' flagship video, our feature videos combine academic interviews and voice-overs with cutting-edge animation, archival materials and cinema-quality high-definition footage. The result is a Hollywood-style in-depth mini-documentary that communicates research unlike anything else.

SHOWREEL

Just as features drill down on a particular academic issue, showreels offer a illustrative showpiece. This can take several forms, from glossy course introductory videos to inspiring meta-studies. There's no better way to show off the depth and breadth of your research.

CASE STUDY

Turn theory into practice with our popular video case studies. This is great for capturing real insights into companies, practitioners and research experiments.

INTERACTIVE VIDEO

Give students an amazing opportunity to interact within the videos they watch. Integrate quizzes, allow students to control their learning and add pop up flash cards and articles as videos play. Students love them!

VIRTUAL REALITY

Although new to some universities, virtual reality has the capacity to revolutionise how we experience learning as we currently know it. With flow paths and interactivity, virtual reality makes learning immersive and feel incredibly real.

ANIMATION

Some ideas are difficult to convey through traditional video – let alone through writing! – and this is where animations come in. Our in-house animators can design bespoke motion graphics videos that bring complex theories and concepts to life.

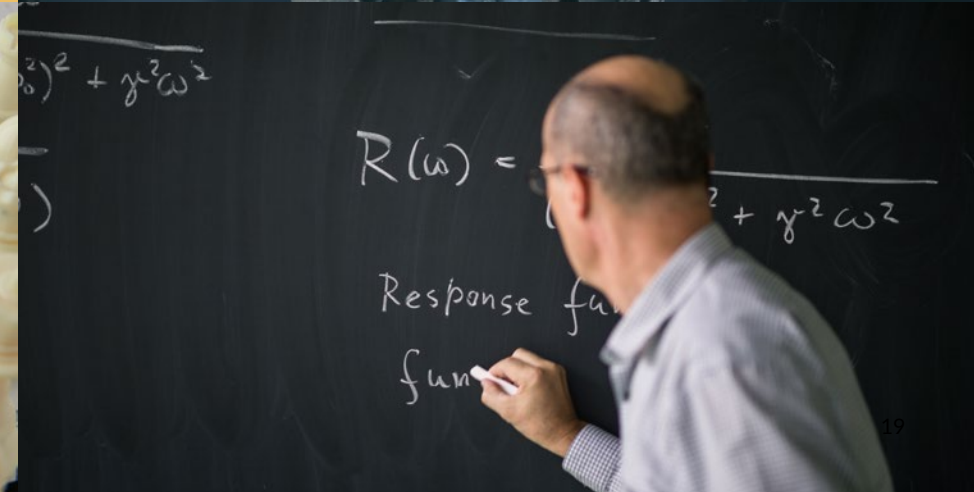

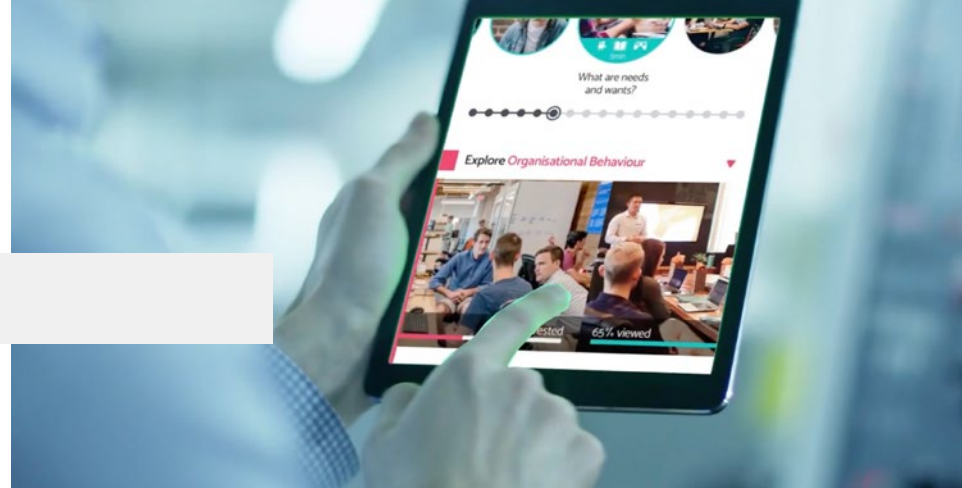

VOX-POPS

Ideal for highlighting social theories, Vox-Pops feature students and members of the public giving their insights on everyday issues, which serve as a jumping-off point for academic debate.

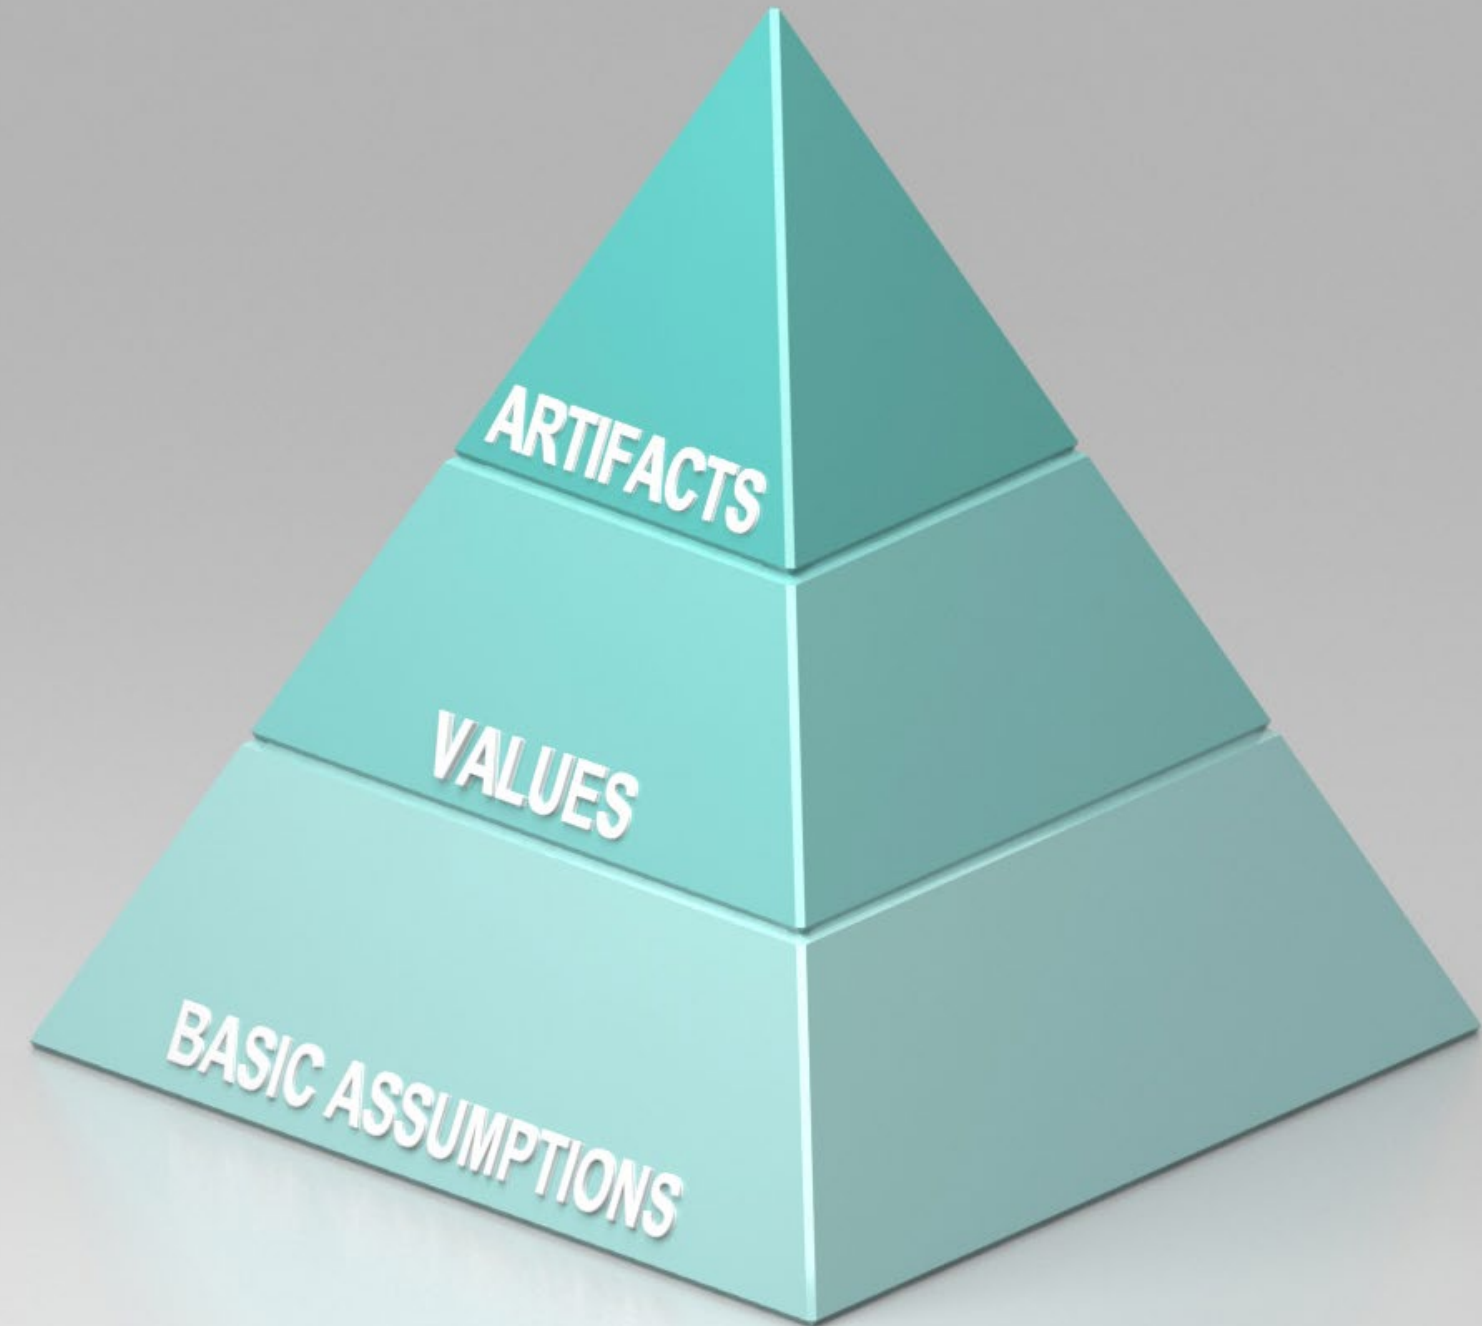

EXPLAINER

Explainers are bite-sized (1 minute) pieces about a single idea or theory of key importance to the learning in question. Each video is built around an explanation from an academic expert and illustrated with archival and contemporary footage.

ANIMATED EXPLAINER

Like the explainer, the animated explainer centres on an expert description of an integral concept, but uses animation in addition to video to facilitate understanding.
